

DRINTEC™

Experts in water remineralization

Ras Abu Fontas 3, Qatar, 168,000 m³/d

La Caleta, Spain, 10,000 m³/d

Who we are?

Experts in the design of upflow limestone contactors of constant height for the remineralization of desalinated water

What we do?

- Customized solutions to project requirements
- Projects from 50 m³/d upwards

Why us?

- Pioneers and innovators in efficient remineralization solutions
- Worldwide expertise
- Technical support throughout the project
- Wide range of options to fit different requirements:
 - FRP tanks
 - Steel tanks
 - Concrete cells
 - Open top containers

Corrosion control for desalination

Corrosion affects:

- Supply network
- Reservoirs
- Residents electrical appliances

DrinTec™ designs remineralization systems that eliminate corrosion

Validated performance

- More than 100 plants designed and implemented worldwide: Spain, Qatar, Saudi Arabia, UAE, Oman, Peru, Chile, USA
- Plants in continuous operation since 2004

DrinTec technology

- Low operational cost
- Long life equipment (25+ years)
- Very low or no energy consumption
- Constant quality without interruptions
- Consistent performance over the years
- Minimal and ease of maintenance
- Low or no automation

Alicante, Spain, 80,000 m³/d
