

## Granulated calcite spreader

The calcite spreader is an accessory that evenly distributes the calcite throughout the area of operation, avoiding the accumulation of calcite in a single point.

### Benefits:

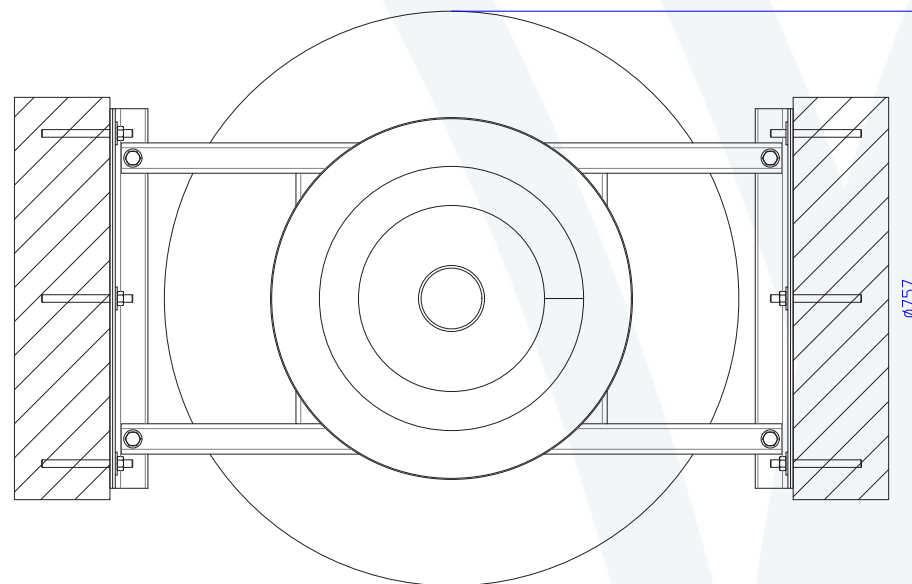

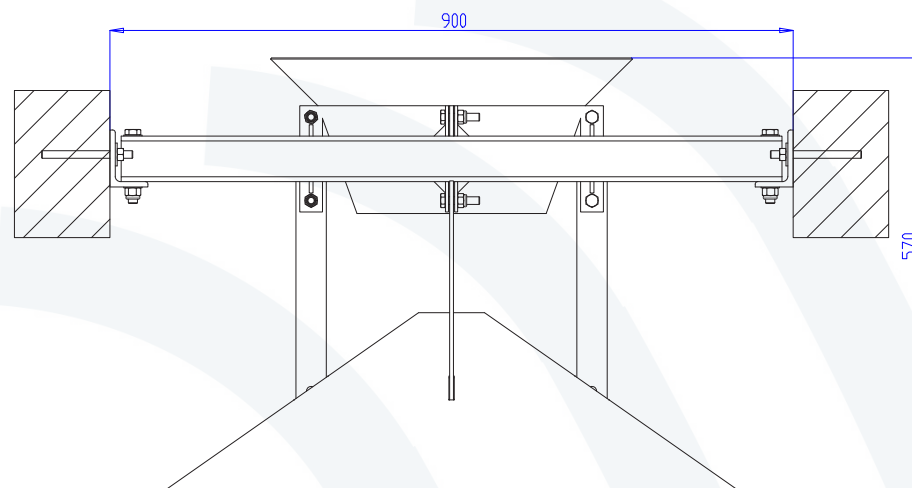

- Avoids the need for an operator to enter the silo to spread the calcite.
- Improves health and safety conditions..

### Calcite distribution:

- Center: 20%
- Perimeter: 80%

### Materials:

- Cones and profiles: SS 316L
- Fasteners: A4
